

TO THE PUBLIC OPINION

The PCSD, founded in 1999, has been promoting worldwide investments to attract technological industries to the country. The invention that has been executing the CPSD promote projects that come from assets in the private sector, buying of assets and contributions that the dominant state has realized, in its condition of promotion of these types of activities a specialized attention is required.

Within the developing projects in the technological industries that have been installing themselves in the PCSD, is the foreign investment company, CEI-RD. It has suggested the establishment in our country as one of the companies with major technological capacities in the matter of transportation of information via internet, data, video, fiber optic networks and satellite worldwide, which would place the Dominican republic in a privileged condition among what is denominated as network access point (NAP) of the Caribbean.

With this breakthrough technology in the matter of communication. As well as a bank of information for all those companies that are national as well as international of America, Europe, Asia and other. The Dominican Republic will become the pioneers on these models or companies, just like the United States and Europe.

The technology for NAP of the Caribbean is highly cost effective because it involves redundancy in all the areas of technological infrastructures to guarantee, value and preserve the different technological services it offers the world in a fast way and instantly.

In September of 2006, CPSD published the convention and elicitation base of conditions for the construction in the area of la Caleta, Boca Chica, in the zone of where the installations the PCSD can be found, also the building and infrastructure that shelters the (NAP) of the Caribbean.

This convention was made under the establishment procedures by the counsel of directors of PCSD, through the elicitation committee designated to ponder and assign under the presented proposals by the different contractors and the different infrastructure that will be executed to shelter such companies.

The licitation commission of the PCSD acts with all cordiality to recommend to the counsel of the directors the assignment of an infrastructure and not necessarily obligated to take in an offer parting from the proposals in economically lower cost, but rather in this decision influence a series of factors and elements. Being one of the major transcendent of capacity of the contractor to comply with the strict norms of engineering, financial history, complying with responsibilities of assigned infrastructures constructed in the area and essentially the capacity to comply with all the requirements established by the national and international norms for this type of constructions under the private investors of the same.

With details complied and after a long study of the proposals made by four companies that rendered the best conditions over the established bases in the elicitation proposals, the designated elicitation commission by the board of directors of the CPSD decided on the 12th of January, 2007 propose to such counsel to add to the constructions of the installations of (NAP) of the Caribbean to the civil contractors and mechanics, ccm.

The company terramark worldwide that operates in the facility has designed and has under their responsibility the operation of other similar centers in Miami, Europe, as provided by the technical assessment of the elicitation commission and its analysis. TERRAMARK signaled that the company with the most capacity to put forth the high demand of necessities of such construction is the company civil contractors and mechanics (CCM).

This decision was proposed to the counsel of directors of the CPSD for its involvement, decision and ratification and the same is being notified to all licitation companies.
